

Real-Time Leak Detection & Emissions Risk Management for Utilities

SENSE Utilities provides utilities with a centralized, real-time view of emissions and leak data —driving faster decisions, reducing risk, and supporting regulatory and voluntary compliance with confidence.

KEY CAPABILITIES

✓ Survey Program Oversight

Manage your leak survey program investigations from one platform.

✓ Investigation & Work Order Management

Track leak investigations and generate work orders directly from the platform to streamline repair workflows.

✓ Performance & KPI Tracking

Monitor survey coverage, miles driven, leaks over time, and generate KPIs for operational insight.

✓ Emissions Visualization & MII Support

Visualize emissions data alongside detection results to support Measurement-Informed Inventory efforts and emissions reconciliation.

✓ Real-Time Route Tracking

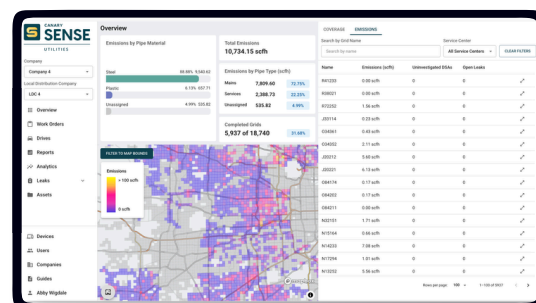

View driven routes and pipeline coverage with real-time tracking and smart visualizations.

✓ Automated Data Sync

All mobile data syncs to the centralized web dashboard for total leak management.

✓ Detection History & Open Leaks

Visualize and easily track all open and previous detections across your system.

DATA & ANALYTICS:

Hardware Agnostic

Seamlessly ingests data from Project Canary devices (e.g., RECON, PICO) and third-party sources.

Advanced Analytics

Actionable insights via intuitive dashboards, supporting leak detection, repair tracking, and emissions management.

Measurement-Informed Inventory

Compare measured emissions data with estimates to support accurate reporting and inventory reconciliation.

Why SENSE Utilities?

CENTRALIZED PLATFORM

All emissions data—from ground-based to aerial—is unified in one software environment.

REGULATORY READY

Supports compliance for Subpart W, state-level rules, and voluntary frameworks (OGMP 2.0, GTI Veritas).

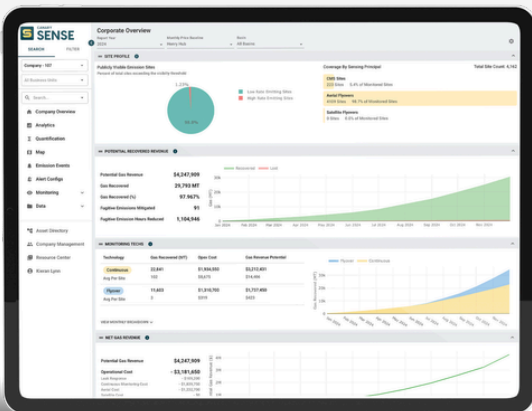

FASTER RESPONSE

Real-time visibility and alerts help reduce emissions risk and improve operational efficiency.

EMPOWERED DECISIONS

Actionable insights and site-level transparency to drive proactive emissions management.

Part of the Project Canary Platform:

SENSE Utilities connects seamlessly with Project Canary's Carbon Portal for comprehensive emissions reporting, inventory management, and reconciliation across regulatory and voluntary initiatives.
